

## Websites of the Month

- July 2013 -

*Celebrating Leonardo da Vinci, Creative Experiments and Fields of Science*

### Exploring Leonardo – Boston Museum of Science

<http://legacy.mos.org/sln/Leonardo/LeoHomePage.html>

An accomplished painter famous for works such as the Mona Lisa, Leonardo was also a talented engineer. Some scholars believe he was working on designing a device to help observe the moon and the stars, a device we now refer to as a telescope. This site is a good place to begin learning about a truly gifted thinker and observer.

### The Science Explorer - Exploratorium

[http://www.exploratorium.edu/science\\_explorer/](http://www.exploratorium.edu/science_explorer/)

This site from the Exploratorium invites kids to “get messy, get airborne, get loud and get shocked.” Projects such as “Rings, Wings and Other Flying Things” and “Mysterious Mixtures” are just two of the 30 different activities that will engage kids in creative science endeavors.

### Ology – American Museum of Natural History

<http://www.amnh.org/explore/ology>

Ology is the American Museum of Natural History’s science website for kids. There are a host of themes ranging from Biodiversity to Paleontology with each theme providing a variety of activities and learning opportunities.

**Cornerstones of Science**

*awakening curiosity, enriching lives*
